

# GSM nanoCELL Phone Networks

## Miniature - Mobile - Private

### “Fly Away Kit” Application

RIVA Networks' new GSM nanoCELL can be configured as your own private, traveling command zone.

Arrive anywhere with command and control in tact. Coordinate arriving resources and teams.

Communicate locally on the nanoCELL or reach back with satellites, the Internet or public phone network connections.

The nanoCELL weighs less than three pounds, is the size of a hard cover book, runs on a laptop and sets up in less than five minutes. Fly-Away cell sites fit into a briefcase or a back pack.

Maintain communications anywhere - in a convoy, on an aircraft, in the desert or on a city street.

Deploy teams with secure, private, low cost COTS cell phone and PDA technology.

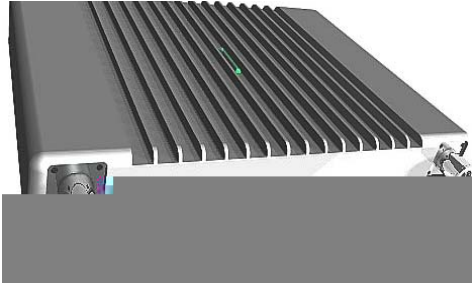

Coordinate hundreds of users quickly.

- Maintain a single, coordinated communications system between: special operations, homeland defense teams, first responders, law enforcement, SWAT and hazmat teams.
- Ideal for embassy personnel and intelligence agents in the field.
- Converse undetected in a crowd.
- “Sniff” the airwaves for un-friendly phone numbers.
- Fail safe system - guaranteed to work when all public networks are down.

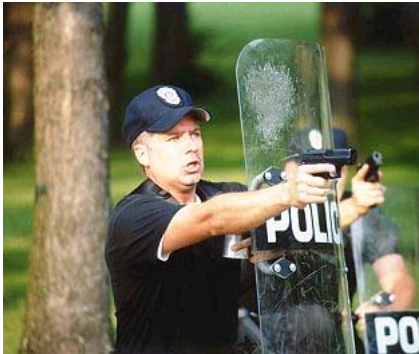

## GSM nanoCELL

miniature, private cell phone networks

- Available in GSM 1800 MHz (DoD spectrum and overseas carrier spectrum) or GSM 1900 MHz (USA Carrier spectrum).
- Convenient Ethernet output makes it easy to forward cell calls to remote locations.
- Reach back and communicate with HQ over satellite links or the Internet.
- Gather information in the field with standard cell phone cameras, watch communicators, and accessories.
- Works independently without relying on public telephone networks, cell phone networks or the Internet.

## Portable Satellite "Reach Back" Terminal

- Avoid the noise and confusion of push-to-talk radios. Initiate **and confirm** communications with secure "point to point" cell phone technology.
- Identify Friendly Forces in the field.
- Reach Back to coordinate mission command and control.
- Support agents that wish to "hide in plain sight" - allowing them to talk over secure phones.
